Quasar

BASED ON CALCIUM HYPOCHLORITE AND ANTI-SCALE AGENTS

Produced by sodium process - 70% active chlorine

Available in 7 g tablets , granules or 300 g sticks.

Medical Surgical Device – Registered by Italian Ministry of Health n ° 20121

BPR (Biocides) registration pending

*Compliant with UNI EN: 1276:2009, 1650:2008, 13623:2010, 13697:2001, 14349:2012
and AOAC 965.13:1995.*

Medical Surgical Device - Registration of the Ministry of Health n ° 20121

Calcium Hypochlorite is the best-selling disinfectant in the world for water treatment in the field of swimming pools, drinking, sanitary and process waters.

⚡ DOES NOT CONTAIN CYANURIC ACID: Quasar does not increase the level of Cyanuric acid in the pool even after reacting. For swimming pools that are particularly exposed to the sun, we recommend the use of the stabilizing activator ACTIV R

⚡ EXCELLENT DISINFECTANT: High oxidizing power, economical application and used since many years for water disinfection.

⚡ HIGH WATER QUALITY: For indoor pools the consumption is equal to organic chlorine one, but the quality of the water is significantly better due to higher Redox potential with the same values of free chlorine and pH. It does not require water balancing accordingly to the Langelier index.

⚡ LOWER ENVIRONMENTAL IMPACT: Optimization throughout the supply chain; from packaging, to transport and disposal operations.

⚡ SPECIAL FORMULATION: Containing antiscaling, it avoids the deposit and precipitates of Calcium ions. It is therefore ideal for all types of water.

⚡ EASY DOSING: Properly projected for perfect dilution by dosing through DDS dispensers.
